CONCLUSION

1. Total revenue was 32.87M, with the New Year period generating the highest revenue.
2. Beauty emerged as a strong performing category, achieving the highest quantity sold and showing consistent revenue performance.
3. Sports had the highest average discount percentage but comparatively low quantity sold, while Electronics achieved comparatively high sales volume with the lowest average discount among the categories.
4. Middle East and North America generated the highest revenue among the analyzed regions.
5. Regional payment preferences also showed clear differences. Asia showed higher preference for UPI and credit cards, North America for UPI and wallets, the Middle East for cash on delivery and wallets, and Europe for debit cards and wallets.
6. The analysis also revealed differences between product categories in customer ratings and review activity, providing additional context for understanding customer engagement and product performance.
7. This project helped me practice approaching data not just as numbers and visualizations, but as business questions that can lead to actionable insights around revenue, pricing, customer behavior, and product strategy.
8. Tools used: Python, Pandas, Power BI, Data Cleaning, Exploratory Data Analysis, Data Visualization, Data Storytelling, and Business Analysis.
